Dear Hiring Manager,

I am applying for the role of Frontend Software Engineer at Coinbase. My previous experience, education, and enthusiasm for Web3 would make me a perfect fit for this position, and I would love to discuss further how I could be an impactful member of your team.

In over two years of experience as a co-op web developer, I have had the chance to work on various projects using technologies such as Node.js, React, and Typescript. My most recent experience at a high-growth startup afforded me many learning opportunities collaborating with senior engineers to write high quality code delivering business value to our customers. As a developer in a small team, I had the chance to take ownership of developing the company's Worker's Compensation product, which required me to frequently collaborate with our product managers and customers to deliver valuable features.

As a computer science and economics student, I am eager to find an opportunity to put both of my passions into practice. Working on increasing economic freedom worldwide at Coinbase is a cause I am enthusiastic about, and I believe my education in economics will allow me to play a role in furthering this cause. Finally, I am excited about Web3 technologies and their role in the future of finances and cybersecurity. I would love the opportunity to be part of the team that pushes these new technologies to the world.

I would be thrilled to discuss further how my experience, education, and enthusiasm would make me a great fit in this position and to learn more about the role and Coinbase as a company. Thank you for taking the time to consider me for this opportunity.

Sincerely,

Julien Bertazzo Lambert
