2 December, 2021

Dear Kira Thomson,

I am writing to apply for the position of Software Engineer at Briza. I would love the opportunity to be a part of the team innovating the insurance industry, and I feel that my experience makes me the perfect candidate. I have 6 months of work experience developing in Typescript and Nodejs, including more experience working on personal projects. I have developed and launched several APIs both as services for web applications as well as services for other developers' use. Through my experience I have also excelled at working effectively in a team environment, I believe that this along with my technical experience makes me an ideal candidate for this role.

During my time at the Ministry of Health I have been developing a full stack web application using Nodejs and Typescript among other technologies, and I have done so working within a team of other developers. One of my most significant tasks in this position was when I was assigned to take the lead on the conversion of the entire project from Javascript to Typescript, which gave me very valuable experience working in Typescript and collaborating closely with my teammates. On my own time I have developed several web-based projects, including an API template written in Python which helps developers launch API services quickly. I even used this template to create Rain Machine, a Javascript library to display weather animations and an API which gives styling instructions based on live weather worldwide. I have always had a passion for developing APIs across several different personal and professional projects, I feel that this passion along with my experience with Nodejs and Typescript and working in a team setting make me a great fit for this role.

I would love to meet with you to discuss further how I might fit well as a part of the team at Briza. I believe my technical experience and my personality fit what you are looking for in a coop student. I know there are challenges to innovation and automation in the insurance industry and I would love to be a part of the solution.

Sincerely,

Julien Bertazzo Lambert
