Dear Hiring Manager,

I am writing to apply for the position of Software Developer for Daisy Intelligence Corporation. I am currently in my 3<sup>rd</sup> year of a degree in Computer Science and Economics, and I have spent the past 6 months working as a full stack web developer. I believe that my previous experience, my time management skills, and my passion for learning new things make me an ideal candidate for this position.

Over the past 6 months I have had the privilege of working for the Ontario Ministry of Health as a coop student doing full stack web development. I worked within a team of other students to design, develop, and test new features on the web-based software we were developing. At the end of the summer, I helped to onboard the new set of coop students who were starting their work term and I have continued to contribute to this project part time throughout the school year. Working in this environment has taught me to effectively balance multiple tasks at a time. I am often called upon to take care of any urgent issues about the software itself, the configuration, or the deployment as a result of my experience, and I have learned to balance and prioritize these issues while continuing to make progress on tasks I have been assigned before.

In both my current position as well as in my free time I have always enjoyed the opportunity to learn new technologies and programming skills. For example, after gaining some experience making basic full stack web applications with Node.js, I learned to make APIs and web applications in Python using tools like Flask, FastApi, and CockroachDB. In my current position I have taken every opportunity available to learn new skills and apply them to the project, gaining some experience with Azure Web Services, Docker, and React testing using Jest.

I would love to meet with you to further discuss how my experience, time management skills, and passion for learning would make me a good fit for this position and as a member of your team. I hope to be able to spend my coop term doing meaningful and innovative work at Daisy Intelligence Corporation.

Sincerely,

Julien Bertazzo Lambert
