12 February 2024

Dear Ameesha Patel,

It was great to talk with you today about the position of Junior Java Developer with Scala at Lancesoft. With my economics background and my experiences with databases and automation, I would be a perfect fit for this position.

I am finishing a double major in computer science and economics, and my experience with finance gives me a solid background for this position. Furthermore, in my last position, I was very involved with designing data structure and storage in a relational database, setting me up nicely for the data required in finance and regulatory calculations. Automation through scripting and improvements to our platform was another significant part of my job. I had the opportunity to automate three months of work while at Briza.

Beyond technical skills, I am also a highly motivated developer and a quick learner, which will help me excel in this position. Furthermore, I have strong experience in verbal and written communication skills. I had the chance at Briza to take ownership of the worker's compensation platform. This position required me to frequently communicate orally and verbally with technical staff, non-technical staff, and even directly with our customers. My effectiveness in communicating technical problems and solutions will surely be impactful at LanceSoft.

From my technical and non-technical experience, I believe I would be an impactful member of your team. I would love to discuss how I might fit LanceSoft's needs at your earliest convenience.

Sincerely,

Julien Bertazzo Lambert
