Dear Hiring Manager,

I am writing to apply for the position of Full Stack Engineering Co-op at Overbond. I would love the opportunity to be a part of the team transforming the finance world here and I believe that my experience makes me the perfect candidate. I have over 7 months of work experience in full stack web development at the Ministry of Health developing both the frontend software in React, as well as the API that serves it. Through this experience I have also excelled at working effectively in a team environment and I believe that this along with my technical experience makes me an ideal candidate for this role.

While working at the Ministry of Health I have had the opportunity to develop a full stack web application. Beyond the experience I gained with the languages and frameworks used, I also had the opportunity to learn more about the structure and architecture of full stack software products and how to work effectively with a team of other developers while merging daily. Learning proper structure for the application was crucial to our understanding of the application itself, as well as to understand the best ways to implement new features. Working effectively within a team setting was necessary to our workflow as each member of our team would be merging changes daily. These are the kinds of skills that I would love to bring to this position in the Overbond team.

I would love to meet with you to further discuss how I might fit well as a part of the team at Overbond. I believe my technical experience and my experience with structure and collaboration in web applications fit what you are looking for in a coop student and I would love to be a part of a team innovating in the world of finance.

Sincerely,

Julien Bertazzo Lambert
